Logging on:

<table>
<thead>
<tr>
<th>Collaboration Sites</th>
<th>Site Address</th>
</tr>
</thead>
<tbody>
<tr>
<td>Training / Test</td>
<td><a href="http://teams.rsccd.edu/sites/test">http://teams.rsccd.edu/sites/test</a></td>
</tr>
<tr>
<td>Production</td>
<td><a href="http://teams.rsccd.edu/">http://teams.rsccd.edu/</a></td>
</tr>
</tbody>
</table>

Use your district network account to login ie. Lastname_firstname and password or
If you have a newer district network account type such as ta12345 and password.

In either case, make sure the RSC domain is present. If not, then precede your user account with “RSC\”.
For example: RSC\Styffe_Amy or RSC\ta12345 for new user types.

Team Site Editing:
As an owner type of user, you can modify your site by using the SharePoint editing tools.

Site Permissions Overview:
As an owner type of user, you can also administrate site permissions. This means:

- Define who can access the information in your collaboration site.
- Define the type of access such as read only, contributor or owner.
- Define access by individual user or group of users.

There are previously defined groups with specific permissions for a given site. They are:

<table>
<thead>
<tr>
<th>Group Name</th>
<th>Permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Site Visitors”</td>
<td>Read only</td>
</tr>
<tr>
<td>“Site Members”</td>
<td>Contribute (add or change)</td>
</tr>
<tr>
<td>“Site Owners”</td>
<td>Administrate (Full permissions)</td>
</tr>
</tbody>
</table>

These types of groups show in the Site Permissions page. Placing a user into one of the above groups grants the user the corresponding group permission for that site.
Assigning a user to a SharePoint “Site Members” group:

The following steps grant Victoria Williams “contribute” privileges by adding her to the SharePoint “WTFGroup Members”. This will allow her to modify or add documents in the WTFGroup site:

1. Click on the Site Actions button:

2. Select the Site Permissions from the dropdown menu:

3. Click on the SharePoint “WTFGroup Members” group:

4. Then click on New link to add a user.

5. Enter the user name Williams_victoria in the “Users/Groups” box and check its name by clicking on the check name button. The name should look like this after it is checked:

6. Remove the check mark from “Send welcome e-mail to the new users” box, and then click the OK button.

This same procedure steps apply to give a user “read only” or “administrator” type privileges to a site. The only variants are the group selected and site of interest.
Assigning an Outlook group the “read only” permission in the WTFGroup site.

The Outlook group SCC faculty contains a previously defined list of user accounts. These types of Outlook groups allow us to send an email to all of the users contained in them. Similarly, SharePoint allows us adding an Outlook list of accounts contained in a group to a SharePoint site group granting them the associated privileges in a team site.

The following steps show how to add the Outlook group SCC faculty into the SharePoint group “WTFGroup Visitors”. This will allow all users in the Outlook SCC faculty group “read only” access to the WTFGroup site:

1. Click on the Site Actions button:

2. Select the Site Permissions from the dropdown menu:

3. Click on the “WTFGroup Visitors” group:

4. Then, click on New link to add the Outlook group name.

5. Enter the user name “SCC Faculty” in the “Users/Groups” box and check its name by clicking on the check name button. The group name should look like this after it is checked:

6. Remove the check mark from “Send welcome e-mail to the new users”, and then click the OK button.

This same procedure steps apply to give a different Outlook user group “contributor” or “administrator” type privileges to the site. The only variants are the groups selected and team site of interest.
